

What is claimed is:

CLAIMS

- 1 1. (new) A pad of sheet material, comprising:
 - 2 a first plurality of adjacent sheets, each sheet having on a portion of a surface a
 - 3 releasable adhesive so that each of said first plurality of sheets is adhered to another of
 - 4 said first plurality of sheets; and
 - 5 a second plurality of adjacent sheets having both surfaces substantially free of
 - 6 adhesive
- 1 2. (new) A pad of sheet material in accordance with claim 1, wherein said second
- 2 plurality of sheets are removably attached to another of said second plurality of sheets.
- 1 3. (new) A pad of sheet material in accordance with claim 2, wherein each of said
- 2 said second plurality of sheets are each removably attached to said another of said sheets
- 3 by edge encapsulation.
- 1 4. (new) A pad of sheet material in accordance with claim 1, wherein each of said
- 2 second plurality of sheets are each removably attached to said another of said sheets by a
- 3 binding structure.
- 1 5. (new) A pad of sheet material in accordance with claim 1, further comprising a
- 2 first indicator for identifying said first adjacent plurality and a second indicator for
- 3 identifying said second adjacent plurality of sheets.
- 1 6. (new) A pad of sheet material in accordance with claim 5, wherein said first
- 2 indicator is a first color of the edges of said first adjacent plurality of sheets and said
- 3 second indicator is a second color of the edges of said second adjacent plurality of sheets.
- 1 7. (new) A pad of sheet material, comprising:
 - 2 a plurality of sheets of sheet material, each sheet removably attached to an

3 adjacent sheet, comprising;
4 a first portion of consecutive sheets each having a pressure sensitive adhesive on a
5 surface so that each of said first portion is adhered to an adjacent one of said portion; and
6 a second portion of said consecutive sheets having both surfaces substantially free
7 of adhesive.

1 8. (new) A pad of sheet material in accordance with claim 7, wherein said each of
2 said plurality of sheets is removably attached to said adjacent sheet by edge
3 encapsulation.

1 9. (new) A stack of sheet material, comprising:
2 a plurality of sheets;
3 a holding structure, for collectively holding said plurality of sheets;
4 said plurality of sheets having a first portion of adjacent sheets, each sheet of said
5 first portion having on a surface a pressure sensitive, releasable adhesive so that each of
6 said first portion is releasably adhered to another of said first portion, and a second
7 portion of adjacent sheets, each sheet of said second portion being substantially free of
8 adhesive.

1 10. (new) A stack of sheet material in accordance with claim 9, wherein said holding
2 structure comprises an encapsulant.

1 11. (new) A stack of sheet material in accordance with claim 9, wherein said holding
2 structure comprises a binding structure.

1 12. (new) A stack of sheet material in accordance with claim 9, further comprising a
2 first indicator for identifying said first portion and a second identifier for identifying said
3 second portion.

1 13. (new) A stack of sheet material in accordance with claim 12, wherein said first
2 identifier is a first color of the edges of said first portion and said second identifier is a
3 second color of the edges of said second plurality of sheets.
